

VAN DER VALK

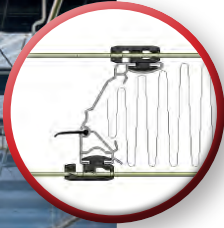

ValkTriplePlus

Screen system

Literally and figuratively designed from a different approach, the ValkTriplePlus screen profile scores better than its predecessor(s) in three important aspects: light gain, flexibility and assembling speed.

The design: screen profiles are generally narrow at the top and wide at the bottom. The ValkTriplePlus profile is exactly the other way around. Its narrow bottom produces a smaller package of screen cloths, while the wider top keeps the profile strong. It also limits the blousing of new screens when opening them. Add to that the possibility to secure plastic wire guide blocks and its rapid installation thanks to prefab rubber seals, and the conclusion is obvious: ValkTriplePlus, 3 times better!

Greater light gain

Revised design with broad top and narrow bottom

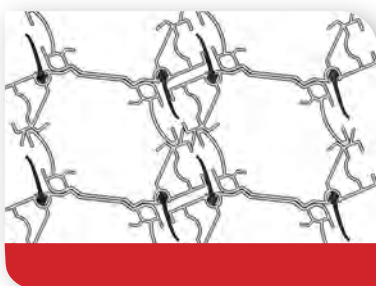

- ✓ Strong profile due to broad top
- ✓ Prevents blousing of screen due to broad top
- ✓ Smallest package size of screen cloth due to narrow bottom

More flexibility

Profile has recesses for plastic wire guide blocks

- ✓ Profile can be quickly fixed at both top and bottom to the atlas wires
- ✓ Improved flexibility of the system as the atlas wires move with it
- ✓ Prevents contact between the atlas wires and the screen profile, which:
 - Makes the system more pliable
 - Prevents cuts
 - Prevents black lines on the screen

Faster installation

Delivered ready for installation

- ✓ Uniquely stackable given its exceptional design
- ✓ Profile prefab fitted with rubber seals
- ✓ Fewer assembly tasks required, less damage
- ✓ Shorter mounting time in the nursery

ValkTriplePlus: effective combinations

The ValkTriplePlus screen profile does not function just by itself. In combination with the components listed below, the ValkTriplePlus profile ensures maximum effectiveness and sustainability of the screen system.

Stainless steel cloth clip

The cloth clip is secured to the edge of the profile and will perform as usual on the new screen when the old one is replaced.

- ✓ Ensures a large storage capacity of the cloth
- ✓ Smallest package size means maximum light gain

Stainless steel truss clamp

The stainless steel truss clamp has become the worldwide standard and has a double lip, which supports the polyester wires better.

- ✓ Fitted with two rounded lips so the polyester atlas wire cannot be damaged
- ✓ Very compact: only 26 mm wide

Galvanised cable tensioner

It can also be supplied with a plastic cable drum to ensure a longer lifespan of the cable.

- ✓ Simplifies tensioning of the cable system
- ✓ Handy mounting bay for rapid securing of the cable

WHY VAN DER VALK HORTI SYSTEMS?

- The only company in the world specialising exclusively in the development and production of ventilation mechanisms and screen systems
- Engineering and production are both in house
- Innovative systems with distinctive benefits for growers
- Quick and reliable deliveries due to our modern machinery and large stocks
- Technical, commercial and project support provided by enthusiastic staff
- Quick and efficient mounting using unique, well designed and high-quality components
- System supplier since 1963
